Entry # 1

Date Range: April 2 – April 8, 2026

1. Current Progress & Goals

What was your main objective for this week? Briefly describe the tasks you completed.

April 2:

- applied CSS reset and base styles
- first commit: base CSS styling

April 3:

- styled the navigation bar layout
- added hover effects and spacing for navigation buttons
- second commit: navbar styling improvements

April 4:

- designed the Hero section layout
- styled search bar and buttons
- third commit: hero section styling

April 5:

- implemented light and dark theme styles using data-theme
- updated colors, borders, and typography
- improved visual consistency of the interface
- fourth commit: theme customization

My main objective for this week was to develop and improve the CSS styling of the CineSearch movie website. I focused on organizing the layout, applying consistent styles, and improving the visual design of the user interface.

I successfully implemented the base styles, navigation bar, hero section, theme customization, and responsive design. These tasks helped make the website more user-friendly, visually appealing, and adaptable to different screen sizes.

2. Challenges & Roadblocks

Did you encounter any technical issues, lack of resources, or changes in your plan? Be specific.

- I had difficulty aligning some elements properly on the page.
- The design did not always display correctly on smaller screens, which caused responsive design issues.
- I did not always have enough time to finish tasks because I was busy with other school activities.
- My groupmate and I were using different PCs or laptops, which made it harder to finish the project quickly because our files or settings were sometimes different.
- I made small coding errors that needed to be fixed.

3. Problem Solving & Pivots

How did you address the challenges mentioned above? What did you learn?

- To address the alignment and responsive design problems, I reviewed my CSS code and tested the layout on different screen sizes.
- To manage my time better, I created a simple schedule and worked on tasks step by step whenever I had free time after my classes and other school activities.
- Since my groupmate and I were using different PCs or laptops, we shared updated files regularly with the help of GitHub and double-checked our settings to make sure our work was the same.
- From these challenges, I learned the importance of time management, communication with my groupmate, testing my code regularly, and being patient when solving problems.

4. Discussion of Next Steps

Based on your progress today, what are your specific and achievable goals for the next session?

- Improve the design and layout (CSS) of the website to make it more engaging for users.
- I will focus on improving the user interface (UI), continue testing the layout on different screen sizes, and make the website cleaner and easier to use.
